INSULATED TOOLS

VDE refers to Verband Deutscher Elektrotechniker in German. Technical working equipment and consumable materials subject to the applicable device and product safety laws bear the VDE-GS mark, which stands for the safety of the product with regard to electrical, mechanical, thermal, toxicological, radiological and other dangers. In addition, tools with the VDE-GS mark conform to the VDE regulations or European or internationally harmonised standards, i.e. they confirm the compliance with the safety requirements of the respective guidelines.

DOUBLE TRIANGLE AND VOLTAGE RANGE

If insulated tools or aids are marked with the symbol of the double triangle and the assigned voltage or voltage range specification or the class, they are suitable for working on energised parts at the stated voltage.

DIN EN 60900 (IEC 60900)

An international standard which, among other things, describes the design of insulated tools in detail. For example, the thickness of the protective insulation is specified. In addition, the standard defines individual tests (piece tests) as well as series and random sample tests for checking the electrical safety of the protective insulation.

INSULATED TOOLS

INSULATION TESTS

Every tool is tested to 10,000V

IMPACT TEST

The first test is carried out at ambient temperature of $23\pm 5^{\circ}\text{C}$ and the energy of impact test can be equal to a fall from a height of 2 meters.

The second test is carried out at an ambient temperature of $-25\pm 3^{\circ}\text{C}$ and the energy of impact test can be equal to a fall from a height of 0.6 meters. If with C marked, the test need to be done by $-40\pm 3^{\circ}\text{C}$.

ELECTRICAL TEST

The test piece is immersed in a bath of water at room temperature for 24 ± 0.5 hours. there should be no electrical discharge, spark over or flashover during 3mins testing at a voltage of 10KV.

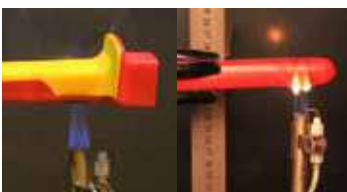

INDENTATION TEST

With loading a weight of 20N and a voltage of 5KV, the indenter is applied to the centre of handle. under the situation, the testing piece should pass the electrical test.

TEST FOR ADHESION OF THE INSULATING MATERIAL COATING

The test piece is heated to $70\pm 3^{\circ}\text{C}$ for 168 hours, then loaded with weights. the handle should fully attached to the metal part aer 3mins testing.

FLAME RETARDANCY TEST

The flame is applied to the test piece for 10 seconds. the height of the flame on the burning handle should not exceed 120mm in 20 seconds after burner removed.

NON SPARKING TOOLS

The WOKIN non-sparking tools are specially designed for safe operations in environments subject to potential risk of explosion, in the presence of flammable liquids or gases, or for any applications that require using perfectly antimagnetic, corrosion-resistant tools.

Non-sparking tools are made of materials that do not contain iron (non-ferrous metals) and therefore the risk of a spark being created while the tool is in use is reduced. Non-sparking tools protect against both fire and explosion in environments that may contain flammable liquids, vapors, dusts or residues. When working in confined spaces and areas where flammable gases or dusts are present, using a non-sparking tool is the best practice.

NON SPARKING TOOLS

CLASSIFICATION OF AREAS SUBJECT TO EXPLOSION RISK

ATEX	HIGH	MEDIUM-LOW	EXTREMELY LOW
GASES	<p>ZONE 0 AN area in which an explosive atmosphere consisting of a mixture of air and flammable substances in the form of gas, vapour or mist is continuously present or present for long periods or frequently</p>	<p>ZONE 1 AN area in which an explosive atmosphere consisting of a mixture of air and flammable substances in the form of gas, vapour or mist is likely to occur in normal operation</p>	<p>ZONE 2 AN area in which an explosive atmosphere consisting of a mixture of air and flammable substances in the form of gas, vapour or mist is not likely to occur in normal operation but if it does occur, will persist for a short period only</p>
DUSTS	<p>ZONE 20 AN area in which an explosive atmosphere in the form of a cloud of combustible dust in air is continuously present or present for long periods or frequently</p>	<p>ZONE 21 AN area in which an explosive atmosphere in the form of a cloud of combustible dust in air is likely to occur in normal operation occasionally.</p>	<p>ZONE 22 AN area in which an explosive atmosphere in the form of a cloud of combustible dust in air is not likely to occur in normal operation but, if it does occur, will persist for a short period only.</p>
